Austin ISD

The Austin Independent School District (AISD) selected Course InSite® as the preferred Professional Development Management System (PDMS) for it's Staff Development Academy's e-Campus. AISD deployed the system for approximately 15,000 professional educators to address workshop and seminar management, learning plans, portfolio and transcript management. In the near future, AISD will offer web-based learning modules and blended learning solutions using Course InSite's web-based content delivery capabilities.

In addition, because of its ability to manage all formats of AISD's training as well as its continuing education records, Course InSite® has better enabled AISD to meet the professional development accountability requirements by the State of Texas and the "No Child Left Behind" legislation.

Education Service Center 13

ESC Region XIII in Central Texas has tightly integrated Course InSite® into the daily operations of the organization. By using Course InSite as an end-to-end management system for professional development, they were able to automate a large number of labor-intensive tasks and gain capabilities they never had before. They were also able to stop publishing and distributing their twice-yearly catalogs, resulting in significant savings in a number of different expense areas.

The Avatar and ESC 13 teams were very pleased that after the first 3 months of operation, 95% of some 3,500 professional educators that were using Course InSite® gave the product a positive approval rating. ESC 13 currently has more than 27,000 user accounts. In addition to workshop and seminar management, the regional service center has developed a number of on-line and blended Course InSite courses and is offering these as an integrated part of their professional development.

Leander ISD

Leander ISD selected Course InSite® after an extensive yearlong search for a web-based Professional Development Management System.

Course InSite® was chosen as the best solution to assist the District in the following:

· Meeting the training and accountability requirements for No Child Left Behind

· To have an efficient, automated process for offering and managing workshops, seminars, and other events on-line

· To have an effective method for tracking and managing the portfolios and learning plans of their professional educators on-line

· To create, deliver, and manage on-line and blended Professional Development modules and assessments

LISD had a very aggressive time line and Avatar Technology was able to help them meet their deadlines and goals through a highly developed implementation process that is proven time and time again by the staff at Avatar.
